

Waste separation systems and organising solutions for the kitchen.

Edition 6

A modern kitchen sink area with a multifunctional tap, a built-in waste bin, and a food waste disposal unit. The sink is set into a dark countertop with a dark wood-grain cabinet below. The tap is a sleek, curved design with a secondary spout. The cabinet below the sink is open, revealing a built-in waste bin and a food waste disposal unit. The background is a dark, textured wall.

The Water Hub: Drink. Clean. Prep.

Most food preparation starts around the kitchen sink. This is where you wash your hands and prep your food. Once you realize the importance of water within the kitchen, the value of the water hub becomes crystal clear. Clean – Prep – Dispose - Consume. Combining several stand-alone solutions for a perfectly integrated system will ensure seamless integration with one another. Hence the rise of the water hub.

In drinking water, preparing food and cleaning up, we spend more than half our time in the kitchen at the water hub. So why not make this station work for you?

A modern water hub very often includes a multifunctional mixer or a regular mixer and secondary tap that offers regular hot and cold water as well as filtered drinking water and instant near boiling water all at one station. The convenience around the water hub is further increased, with the modern sink now offering several accessories for easier food preparation and cleaning. Finally, no water hub would be complete without a built-in waste bin and food waste disposal unit. All items working hand in hand to make food preparation easier, faster and more hygienic.

In breaking down the components further to understand their full value, we start with the mixer tap. Most consumers appreciate the value of warm and cold water on demand for everyday kitchen functions. However, with the rise in popularity of bottled water, the water hub has evolved to offer filtered drinking water on demand - eliminating the need for plastic bottles. Why carry home heavy bottled water, and be left with the task of safely disposing the empty bottles once used, when filtered water can be available on tap? In addition, these very same taps will also offer instant near boiling water. Say goodbye to the kettle and wasted time boiling water. With around 60 cups of boiling water per hour, the perfect cup of tea is only seconds away. Unfortunately, with food preparation comes waste, and what faster way to dispose of food waste than the hidden gem in the water hub- the food waste disposal unit. Simply flush the food waste down you sink outlet, grind and move on. No more smelly bins or unwanted pests as food waste is eliminated quickly and efficiency. Food waste accounts for about 30% of all kitchen waste. For the balance, the built-in bin below the sink completes the water hub. Of course, any good water hub needs to take into account the realities of space restrictions in a kitchen. That is why all components are designed to fit into one cabinet, neatly taking up different positions inside the cabinet to work together performing their different functions.

Drink. Clean. Prep. Dispose... It all flows naturally with the water hub in place.

Hailo – The Brand that stands for Quality.

A kitchen needs to be perfectly equipped if you want to enjoy cooking or any of the other work that goes on in a kitchen. Waste disposal may not be the first thing that comes to mind in that regard, but it has a significant role to play when it comes to exploiting all the possibilities of the modern kitchen.

The products should still work perfectly and make life easier, even after many years. At Hailo, every new product we develop first undergoes an endurance test. That's because we understand "Made in Germany" to mean precisely what our customers expect of a market leader in fitted kitchen technology: first-class quality and innovative solutions that make working in the kitchen easier and more enjoyable. That's what you can expect from us and what you should measure us by, because we want to fully meet this standard at all times!

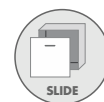

Waste Separation Systems

The Hailo Pantry Box.

The Hailo Pantry Box is suitable for storing food, dietary supplements, medicinal products, baby food and preparation items that do not need to be kept in the refrigerator.

It is also ideal for storing dry foods, such as bakery products, muesli and oats, so they are within easy reach at all times. The Pantry Box can even be used to store a variety of raw vegetables as it has a tight-fitting sliding cover to lock in odours and ethylene* and keep out fruit flies. The contents can also be protected from the light by closing the drawer.

CERTAIN FACTORS MUST BE HEEDED FOR STORAGE!

The Hailo Pantry Box is designed to store food which is for everyday use and is consumed quickly. The room temperature must be taken into account. The temperature in the Pantry Box will rise if it is placed next to underfloor heating, electrical appliances or radiators, so it is not recommended for the long-term storage of a range of foods.

Organiser Systems

Pantry Box

The multi-purpose organiser system designed for deep drawers with a width of 600mm.

- Stable, easy-to-clean plastic base
- Removable plastic grid for drainage & ventilation.
- Removable caddy for storage of smaller items.
- Safety-glass sliding lid that can be easily removed for cleaning.
- Hygienic environment for your food storage.
